

Buster Bar Harrow Attachment

The Precision Buster Bar harrow attachment is designed to attach to secondary tillage tools such as disks or cultivators. By disking and harrowing in one trip, you save time and fuel and do a better job of working up your ground. This improves the seedbed by conserving moisture and prepares the soil for better incorporation of chemicals.

The rigid teeth travel at an angle to level ridges and fill furrows as well as break up the weed clods for better killing and overall improved chemical incorporation.

Adjustable work level of teeth is maintained by tension of heavy duty spring.

Double u-bolt mounting securely mounts tooth bar to each carrying arm. Clean smooth bar clears trash and avoids dirt build up. Heavy duty 7/8"x9 1/2" bolt on teeth give good penetration and long life. Vertical center teeth prevent ridging.

Vertical height adjustment with pin lets you match buster bar to the implement. Suspension spring suspends harrow bar while in transport.

- Saves Trips
- Aids in Weed Control
- Helps to Level
- Reduces Compaction
- Better Chemical Incorporation
- Saves Fuel
- Cuts Costs
- Aids Germination
- Helps Stop Erosion
- Conserves Moisture
